

# Graphic Organizer Activity

## 2

### Methods of Research

**Directions:** Psychologists use five different methods of research. Studies are one method of research. Complete the graphic organizer by listing the other four methods of research. Then list the three types of studies. Two methods of research use variables. Place those two methods in the boxes that connect to the "Types of Variables" box. One of those two methods also uses different groups of people. Be sure to place it in the box connected to the "Types of Groups" box. Then list the two types of variables and the two groups of people used in psychological research.
