

Graphic Organizer Activity

9

Types of Learning

Directions: Complete the graphic organizer using information provided in the chapter.

The Two Types of Conditioning

CLASSICAL CONDITIONING

Type of Stimulus	Description
Neutral	No initial response elicited
Unconditioned	Predictable response elicited
Conditioned	once neutral, trained to elicit desired response

OPERANT CONDITIONING

Type of Reinforcement	Description
Positive	Reward for desired behavior
Negative	Remove unpleasant consequence for desired behavior
Punishment	Unpleasant consequence for undesired behavior
Primary	Satisfies biological need
Secondary	Value paired with primary
Schedule of Reinforcement	Description
Fixed interval	Regular points in time
Variable interval	Time between unknown
Fixed ratio	After specified number of responses
Variable ratio	Based on unknown number of responses

Type of Response	Description
Unconditioned	Natural reaction to a stimulus
Conditioned	Learned response to a conditioned stimulus
Generalization	Similar stimuli elicit CR
Discrimination	Respond differently to similar stimuli
Extinction	Gradual disappearance of CR when CS repeated without UCS
Spontaneous Recovery	Reappearance of extinct CS when CS re-paired with UCS

UCS
CS

UCR
CR
